

# Azure DevOps / Automation Engineer - Contract

My clients are searching for very talented Azure Dev/Ops Engineers. You will have an enviable role in a fast moving and energetic team. Key places of work will be in Auckland or Wellington but with the occasional requirement to travel. As you will be working closely with external clients you will need to be front facing and have great communication skills.

Below are the key technical skills that you must be able to demonstrate hands-on experience and expertise in:

- 4+ years experience in Azure DevOps and security engineering
- Microsoft Certified in DevOps Engineering and Azure Security
- Proven success in migrations to cloud and hybrid environments
- CI/CD Pipelines as code and best practises
- Excellent Scripting skills
- Strong automation, code integration and deployment
- Solid understanding of networking, concepts in cloud such as load balancers, application gateways, WAF, DNS, VNets
- Configure Azure active directories
- Identity workload management
- Tenant security
- Network security - firewalls, NSGs
- Agile Planning tools
- Jenkins
- Spinnaker

Soft skills required:

- Good communication skills and ability to work one on one with business clients or with your team.
- Self starter - you need to be able to work with a team as well as autonomously.
- Well presented.
- Flexible - a number of transitions may take place after business hours such as the early morning. As a key part of the team you will either need to be available on site or remotely when these transitions take place.

If you are able to meet the above requirements and wish to be part of an exciting new and innovative team please send through your CV to [karin@atelltd.co.nz](mailto:karin@atelltd.co.nz). If you have any further questions please do not hesitate to contact Karin Pepping, ATEL Ltd on [021733938](tel:021733938). Only candidates with NZ residency or NZ work visas should apply.

# AWS DevOps Developer - Contract

My clients are searching for competent, adaptable and proficient AWS developers. You will be working with a new and energetic team. Key places of work will be either Auckland or Wellington but with the occasional requirement to travel. As you will be working closely with external clients you will need to be front facing and have great communication skills.

Below are the key technical skills that you must be able to demonstrate hands-on experience and expertise in:

- Code Pipelines (CodeCommit, Codebuild, CodeDeploy) in cross accounts
- API Gateway: preferably with high volume/sec applications
- Document/Data Storage using S3 and/or DynamoDB
- AWS Lambda with Python, .NET, Node.js, or Java
- Security using Secrets Manager and IAM
- Storage gateway
- Digital transformations
- Cloud migration experience.
- Management of cloud architecture and design

Soft skills required:

- Good communication skills and ability to work one on one with business clients or with your team.
- Self starter - you need to be able to work with a team as well as autonomously.
- Well presented.
- Flexible - a number of transitions may take place after business hours such as the early morning. As a key part of the team you will either need to be available on site or remotely when these transitions take place.

If you are able to meet the above requirements and wish to be part of an exciting new and innovative team please send through your CV to [karin@atelltd.co.nz](mailto:karin@atelltd.co.nz). If you have any further questions please do not hesitate to contact Karin Pepping, ATEL Ltd on [021733938](tel:021733938). Only candidates with NZ residency or NZ work visas should apply.

# ITSM PROJECT MANAGER

**Location: Auckland and/or Wellington**  
**6 month contracts**

## **Project Management opportunity in a fast paced environment**

My clients are seeking Project Managers that will own and manage the replacement of the current management system with Service Now. The ideal candidate would have proven success of Service Now implementations.

Ideally our candidate has 7 plus years proven success and demonstrated experience in:

- Managing technical change and delivery with strong engagement and communications with stakeholders, including customers, vendors, system integration partners, and internal teams
- Implementing and roll-out of management systems - preferably Service Now.
- A good understanding of Service Desk management and processes
- Managing IT Infrastructure projects including, networks, virtualisation, windows and desktop implementations, data centre migrations as well as a broad knowledge of IT Infrastructure solutions
- Managing all aspects of the project life cycle and proven track record in delivery is a must
- Working in challenging and fast paced environments
- VMWare, Azure, AWS and O365
- Professional Project Management accreditation is desirable
- Agile certified
- 

The successful candidate will be responsible for:

- creating and managing project plans,
- stakeholder communication and management both internally and customer facing
- leading project teams to meet the clients requirements taking into account timelines, cost, risk and interdependencies within and outside the project
- the production and maintenance of all documentation
- procurement
- change control
- internal progress reporting

If you are able to meet the above requirements then I need to hear from you.

To apply in strict confidence, please contact me as outlined below.
